Maths Working Wall – DISPLAY IT (CPA representations of the questions)								
Build it!	Use a real-life representation of the concept which children can see, touch and feel.							

Draw it!	Show a pictorial representation of the concept.	
Solve it!	Show the mathematical representation of the concept.	$6 \times 2 = 12$ $12 \div 2 = 6$ $2 \times 6 = 12$ $12 \div 6 = 2$ Factors of 12 are: 1, 2, 3, 4, 6 and 12
Practise it!	Encourage children to practice the concept.  Interactive opportunity — ask children to respond to questions, encourage them to add what they know, leave homework for children to take to master the concept.	1 x 2 = 2 2 x 2 = 4 3 x 2 = 6 etc.
Challenge it!	Set a challenge to be solved.  Interactive opportunity – leave real-life objects or manipulatives for children to use to help solve the challenge.	How many different ways can 12 eggs be arranged into arrays?  What if you try 24 eggs?
Say it!	Use vocabulary related to the concept	Multiply, times, repeated addition, array, divide, group, multiples, factors

## Progression in the teaching of place value

Foundation Year 1		Year 2	Year 3 onwards	
Understanding ten	Understanding numbers up to 20	Understanding numbers up to one	Understanding numbers up to one	
		hundred	thousand	
A TENS FRAME is a simple maths tool that helps	'Ten' is the building block of our Base 10	Continue developing place value through the use of	Continue developing place value through the use of	
children:	numeration system. Young children can usually	tens frames.	manipulatives.	
Keep track of counting	'read' two-digit numbers long before they			
<ul> <li>See number relationships</li> </ul>	understand the effect the placement of each digit			
<ul> <li>Learn addition to 10</li> </ul>	has on its numerical value. A child might be able to			

Use *tens frames* flash cards daily to ensure children recognise amounts.

Use empty *tens frames* to fill with counters to enable children to understand number relationships.

Either fill the *tens frame* in pairs or in rows. In rows shows 5 as a benchmark. Children can easily see more than 5 or less.

•	•	•	•	•

Setting the counters in pairs, naturally allows the children to see addition concepts.

Include other visual images such as dice, cards, dominoes etc.

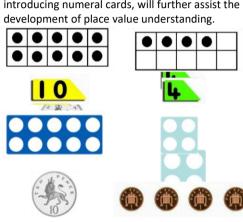

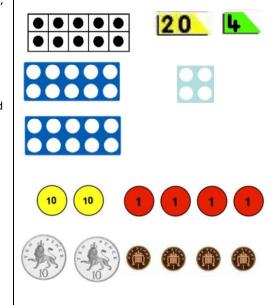

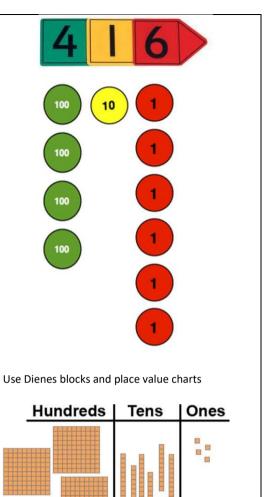

correctly read 62 as sixty two and 26 as twenty-six, and even know which number is larger, without understanding why the numbers are of differing values.

Ten-frames can provide a first step into understanding two-digit numbers simply by the introduction of a second frame. Placing the second frame to the right of the first frame, and later introducing numeral cards, will further assist the development of place value understanding.

Year 4 Year 5 Year 6

## Understanding numbers up to ten thousand

Continue developing place value through the use of manipulatives.

- Place value arrow cards
- Place value counters
- Dienes blocks
- Place value charts

thousands	hundreds	tens	ones
	<b>(IIIIIII</b>	annum	0000
			000
		annin	
		<b></b>	
1	2	4	7
1,000	200	40	7

## Understanding numbers up to one million including decimals

Continue developing place value through the use of manipulatives.

- Place value arrow cards
- Place value counters (including decimal counters)
- Dienes blocks
- Place value charts

	MILLIONS		THOUSANDS ONES				THOUSANDS				
hundred millions	ten millions	millions	hundred thousands	ten thousands	thousands	hu	ndreds	tens	ones		
7	4	5	, 3	0	9	,	2	8	1		

## Understanding numbers beyond one million including decimals

Continue developing place value through the use of manipulatives.

- Place value arrow cards
- Place value counters (including decimals counters)
- Dienes blocks
- Place value charts

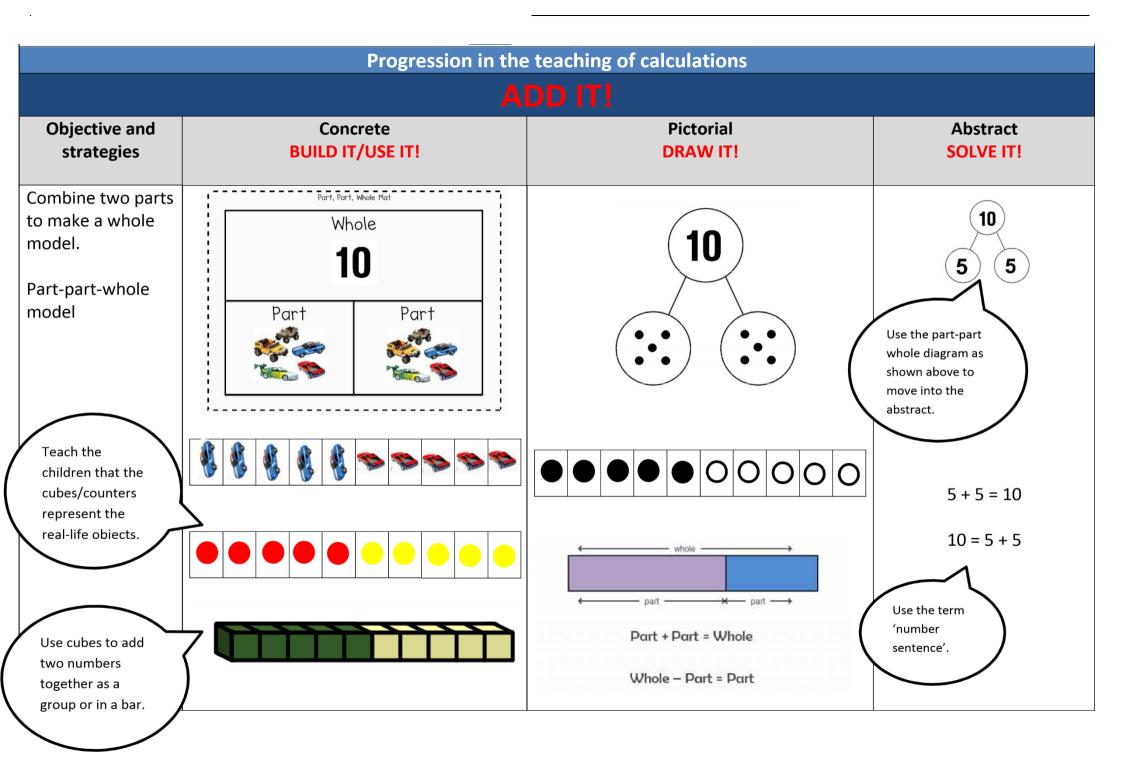

MILLIONS				THOUSANDS				ONES		
hundred millions	ten millions	millions		hundred housands	ten thousands	thousands		hundreds	tens	ones
7	4	5	,	3	0	9	ļ	2	8	1

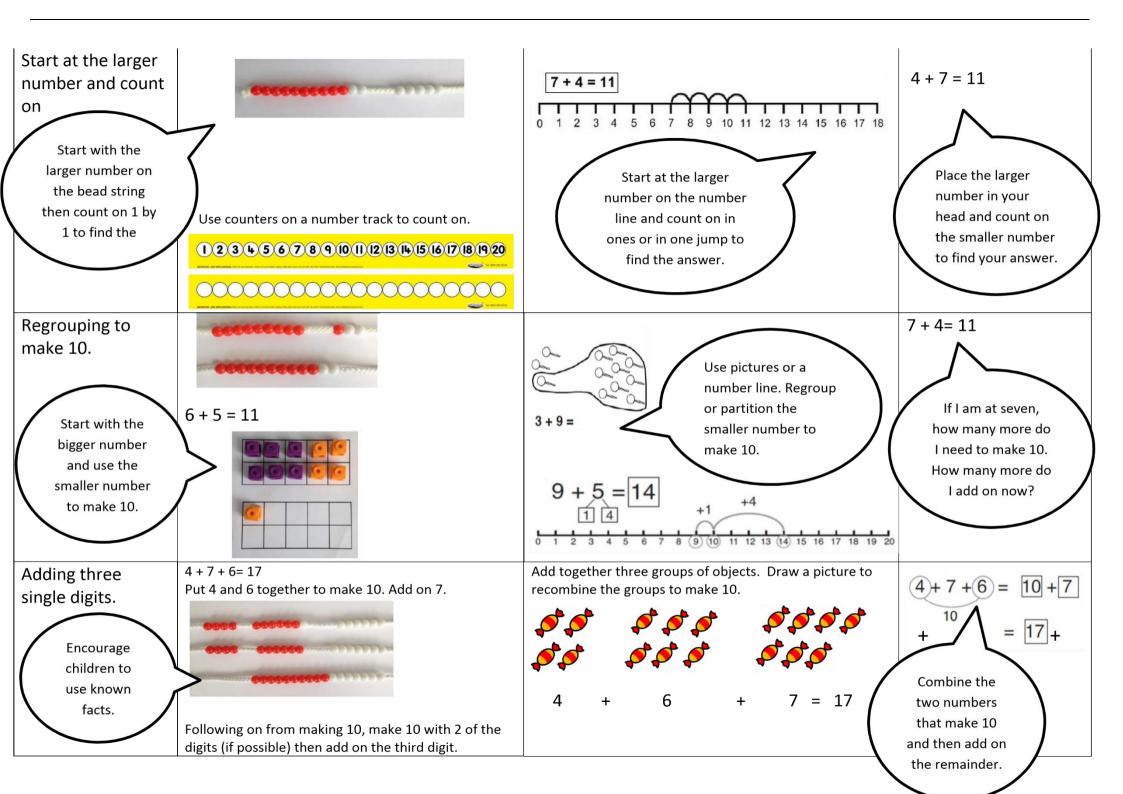

## TENS FRAME IDEAS

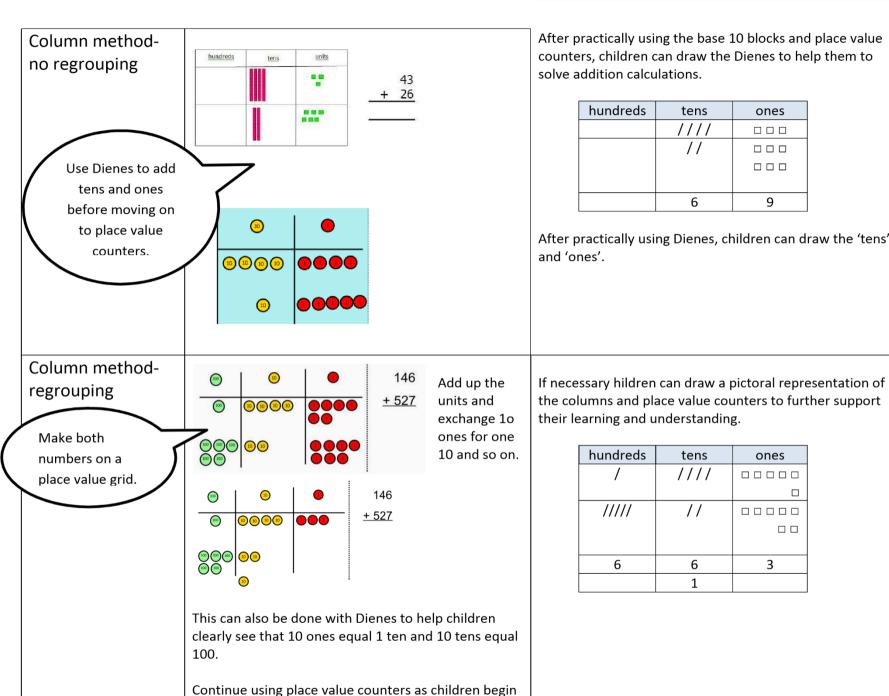

,	
LIFE SIZE TEN FRAME	Create a life-size ten frame in the classroom and outdoor play area. Use counters, pennies, teddies, gingerbread men, children etc.
FLASH	Flash <i>ten frame</i> briefly and have children write the number on a whiteboard. Using whiteboards, rather than having children say the number, ensures that all children attempt to respond and allows the teacher to assess class progress. When the response is oral, not all child responses are audible. Encourage children to share the different strategies used to find the total number of dots for cards, "How did you see it?" This can be varied by asking children to write the number and draw the pattern they saw, or by having them build the number flashed on their own blank frame.
FLASH: ONE MORE	Once children are familiar with the basic patterns, and know them automatically, flash a 10 frame or dot card and ask them to name the number that is one more than the number flashed.  Variation: ask children to give the number that is two more/one less/double/ten more than the number flashed.
I WISH I HAD TEN	Flash a dot card or ten frame showing 9 or less and say, "I wish I had 10". Children respond with the part that is needed to make ten. The game can focus on a single whole, or the "wish I had" number can change each time.  Variation: teacher flashes card and children write the complement of ten on individual whiteboards with dry erase markers.
I WISH I HAD 12	As above but children respond with how many more are needed to make twelve. Children should be confident in facts of 10 before this is attempted. For example to go from 8 to 12, they should realise they need 2 more to get to 10, then 2 more to 12. 2 and 2 is 4.  Variation: Children draw an empty number line on their whiteboards to show the two jumps used to get to the target number.
1 MORE 1 LESS 10 MORE 10 LESS	The following four prompts are written on the board: one more one less ten more ten less The teacher flashes a dot or ten frame card as the 'starting number'. The first child selects one prompt. For example, if the teacher flashes a card showing '5' the first child might say, "one more than 5 is 6", the second child might say, "ten more than 6 is 16", and the third child might say, "one less than 16 is 15". Continue until all children have had a turn.
TEEN FRAME FLASH (11-20)	Teen Frame Flash (11-20) Once children are subitizing ten frame patterns 0- 10, cards showing larger numbers (i.e. more than one ten frame) should be introduced. Use mental math sessions with the following key questions: How many? How many more than 10? As children become familiar with the 'teen' patterns introduce further questions to develop number relationships.  • What is one more/two more than the number I flashed?  • What is one less/two less than the number I flashed?  • How far away is the number I flashed from twenty?  • Double the number I flash.  • What is the near Doubles fact? (i.e., if 15 is flashed, children answer 7+8)
MULTIPLES	Flash a <i>tens frame</i> and ask children to give you the product if the number you flash was multiplied by 2, 5 etc.

## Progression in the teaching of calculations

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Addition	Combining two parts to make a whole: part whole model. Starting at the bigger number and counting on. Regrouping to make 10.	Adding three single digits. Column method – no regrouping.	Column method- regrouping. (up to 3 digits)	Column method- regrouping. (up to 4 digits)	Column method- regrouping. (with more than 4 digits) (Decimals- with the same amount of decimal places)	Column method- regrouping. (Decimals- with different amounts of decimal places)
Subtraction	Taking away ones Counting back Find the difference Part whole model Make 10	Counting back Find the difference Part whole model Make 10 Column method- no regrouping	Column method with regrouping. (up to 3 digits)	Column method with regrouping. (up to 4 digits)	Column method with regrouping. (with more than 4 digits) (Decimalswith the same amount of decimal places)	Column method with regrouping. (Decimals- with different amounts of decimal places)
Multiplication	Doubling Counting in multiples Arrays (with support)	Doubling Counting in multiples Repeated addition Arrays- showing commutative multiplication	Counting in multiples Repeated addition Arrays- showing commutative multiplication Grid method	Column multiplication (2 and 3 digit multiplied by 1 digit)	Column multiplication  (up to 4 digit numbers multiplied by 1 or 2 digits)	Column multiplication  (multi digit up to 4 digits by a 2 digit number)
Division	Sharing objects into groups Division as grouping	Division as grouping Division within arrays	Division within arrays Division with a remainder Short division (2 digits by 1 digit- concrete and pictorial)	Division within arrays Division with a remainder Short division (up to 3 digits by 1 digit- concrete and pictorial)	Short division  (up to 4 digits by a 1 digit number interpret remainders appropriately for the context)	Short division Long division (up to 4 digits by a 2 digit number- interpret remainders as whole numbers, fractions or round)

to work with decimals.

After practically using the base 10 blocks and place value counters, children can draw the Dienes to help them to solve addition calculations.

hundreds	tens	ones
	////	
	//	
	6	9

After practically using Dienes, children can draw the 'tens' and 'ones'.

hundreds	tens	ones
/	////	
/////	//	
6	6	3
	1	

Calculations 21 + 42 =

Only select numbers which do not involve regrouping.

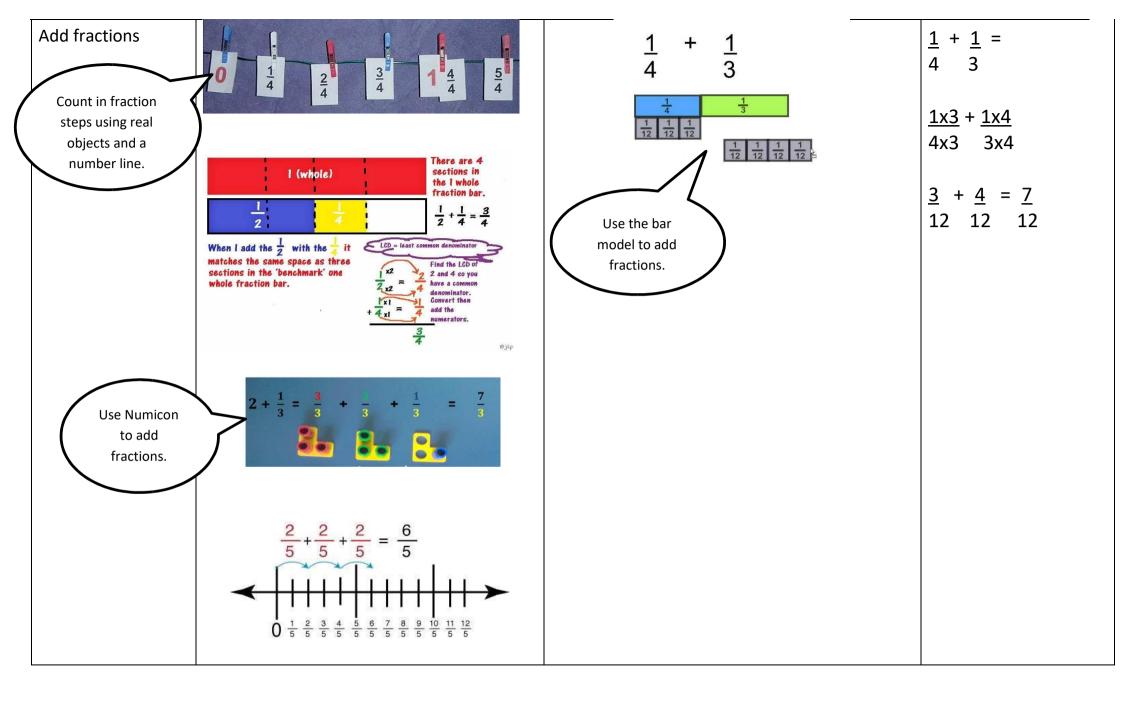

536

As the children move on, introduce decimals with the same number of decimal places. 72.8

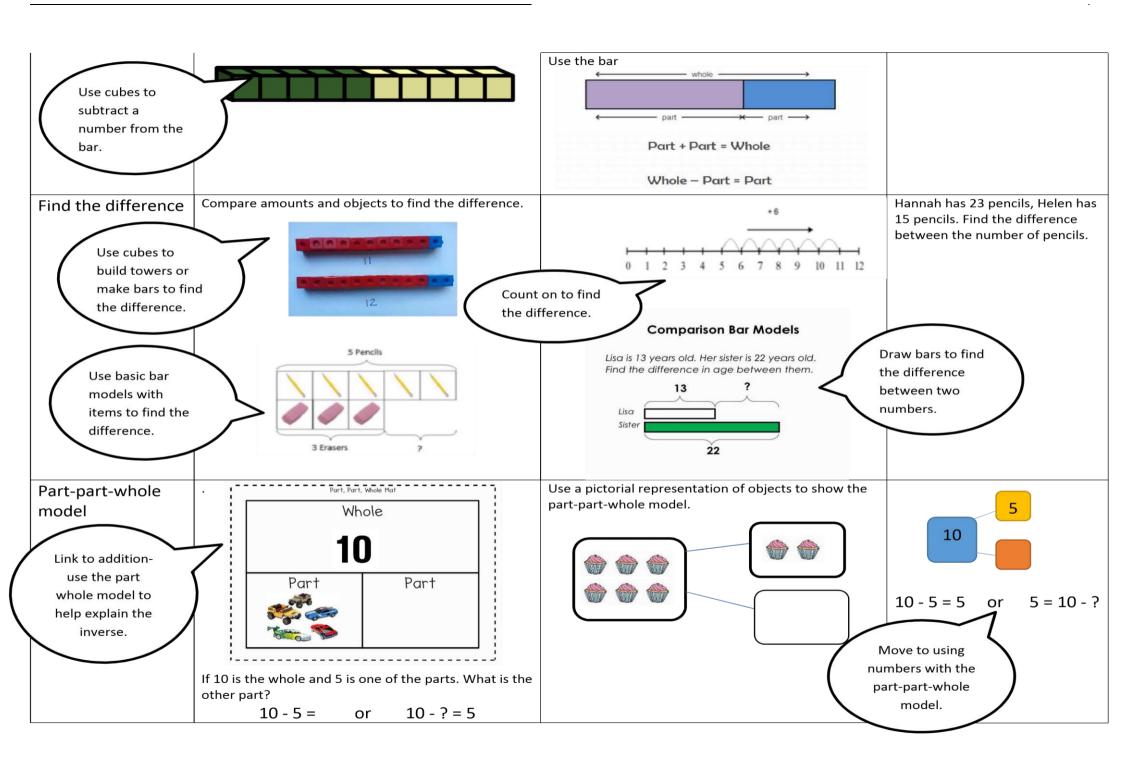

> +54.6127.4 1 1

Then move onto decimals with a different number of decimal places.

2	3	3	6	1
	9	0	8	0
5	9	7	7	0
+	1	3	0	0
9	3	5	1	1

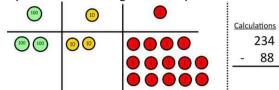

#### **Progression in Calculations Policy Objective and** Concrete **Pictorial** Abstract strategies **BUILD IT/USE IT! DRAW IT! SOLVE IT!** Cross out drawn objects to show what has been taken Taking away ones 4 = 6 - 2Use real-life physical objects, counters, cubes etc. to away. show how objects can be taken away. 18 - 3 = 158 - 2 = 65 - 2 = 3Put 13 in your head, count back 4. Counting back Make the larger number in the subtraction Count back on a number line or number track calculation. Move the beads along the bead string What number are you at? Use whilst counting backwards in ones. your fingers to help. 13 - 4Start at the bigger number and count back the smaller Children will need number showing the jumps on the number line. Use counters and regular practice move them away counting from the group backwards. whilst counting backwards.

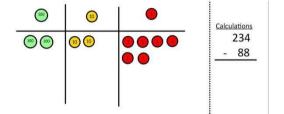

Make 10	14 – 5 =		
	Make 14 on the ten frame. Take away the four first to make 10 and then takeaway one more so you have taken away 5. You are left with the answer of 9.	Start at 13. Take away 3 to reach 10. Then take away the remaining 4 so you have taken away 7 altogether. You have reached your answer.	16 – 8 =  How many do we take off to reach the next 10?  How many do we have left to take off?
Column method without regrouping	75- 42 =  Use Dienes to make the bigger number then take the smaller number away.  Show how you partition	Draw the Dienes or place value counters alongside the written calculation to help to show working.  Calculations  3 2	This will lead to a clear written column subtraction. $47 - 24 = 23$ $- \frac{40 + 7}{20 + 4}$ $- 20 + 3$
	numbers to subtract. Again make the larger number first.	Calculations 176 - 64 = 176 - 64 112	32 - 12 - 20

#### Column method with regrouping

Make the larger number with the Dienes or place value counters. Start with the ones, can I take away 8 from 4 easily? I need to exchange one of my tens for ten ones.

Now I can subtract my ones.

234

#### Now

look at the tens, can I take away 8 tens easily? I need to exchange one hundred for ten tens.

	1000	(io)	Calculations
•	<b>⊚</b>	00000000000000000000000000000000000000	234 - 88

Now I can take away eight tens and complete my subtraction

100	(10)	•	Calculations
100	(1) (1) (1) (1) (1) (1) (1) (1) (1) (1) (1) (1)	••••	' <b>23</b> 4 - 88 146

Show children how the concrete method links to the written method alongside your working. Cross out the numbers when exchanging and show where we write our new amount.

Draw the counters onto a place value grid and show what has been taken away by crossing the counters out as well as clearly showing the exchanges made.

When confident, children can find their own way to record the exchange/regrouping.

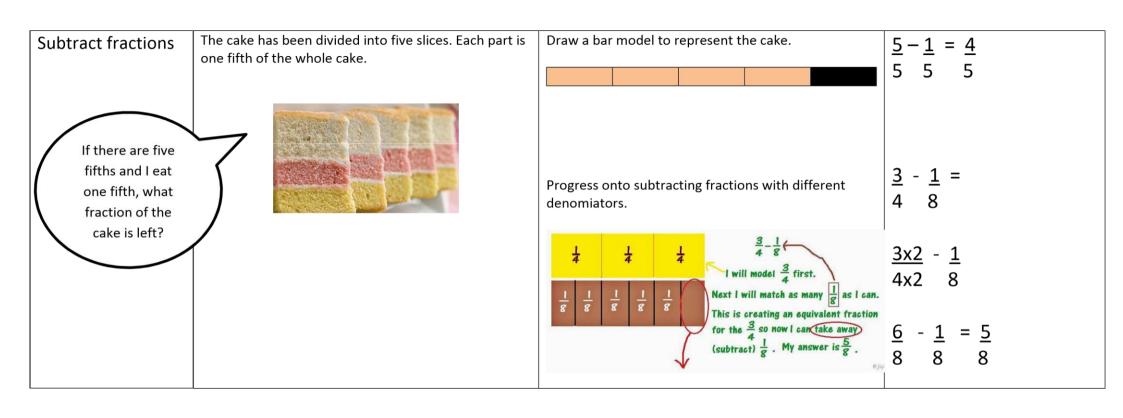

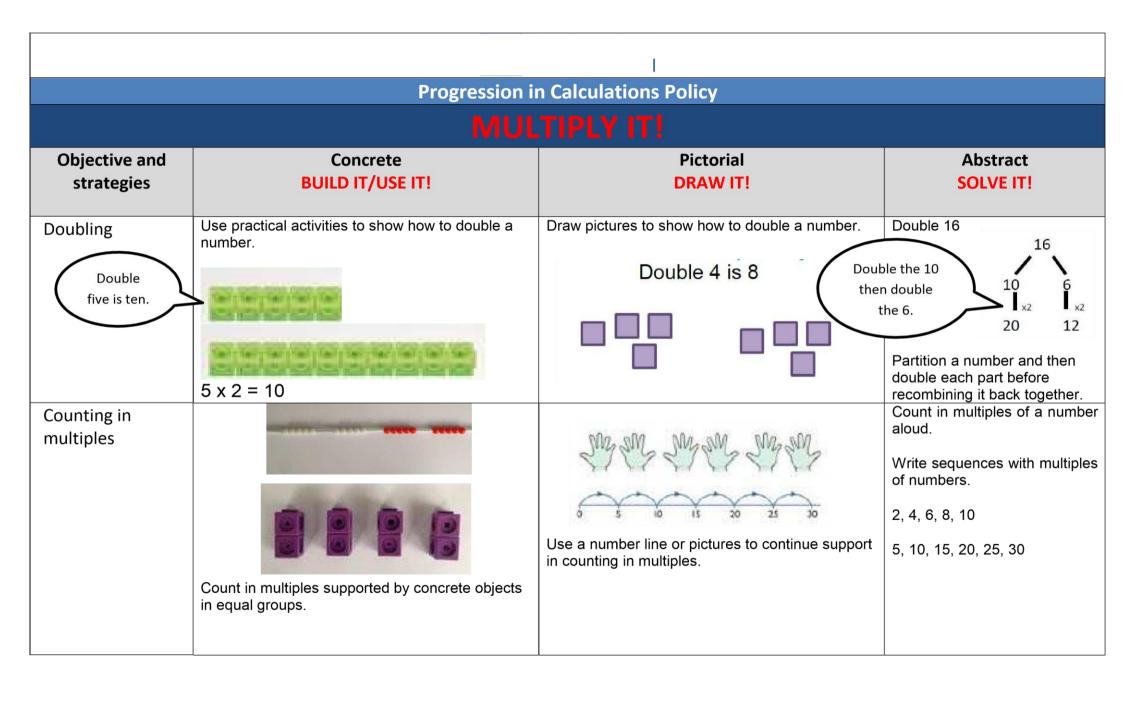

Children can start their formal written method by partitioning the number into clear place value columns.

Moving forward the children use a more compact method.

This will lead to an understanding of subtracting any number including decimals.

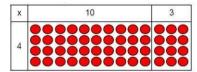

#### Write addition sentences to describe Repeated addition objects and pictures. There are 3 plates. Each plate has 2 star biscuits on. How many biscuits are there? 2 add 2 add 2 equals 6 Use different objects to add equal groups. 5 + 5 + 5 = 157 8 9 10 11 12 13 14 15 Create arrays using counters/ cubes to show Arrays- showing Use an array to write multiplication Draw arrays in different rotations to multiplication sentences. sentences and reinforce repeated find commutative multiplication commutative 0000 4×2=8 sentences. addition. multiplication 0000 2×4-8 00 2×4=8 00 00 $4 \times 2 = 8$ 5 + 5 + 5 = 153 + 3 + 3 + 3 + 3 = 15Link arrays to area of rectangles. $5 \times 3 = 15$ $3 \times 5 = 15$

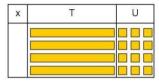

#### Grid Method

Show the link with arrays to first introduce the grid method.

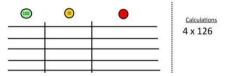

4 rows of 10 4 rows of 3

Use Dienes to move towards a more compact method.

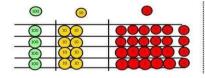

4 rows of 13

Use place value counters to show finding groups of a number eg. multiplying by 4 so we need 4 rows.

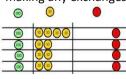

Fill each row with 126.

Calculations 4 x 126

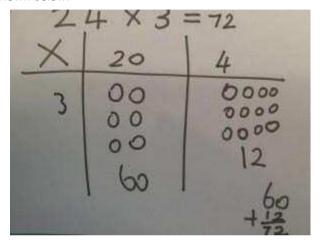

Add up each column, starting with the ones making any exchanges needed.

Children can represent the work they have done with place value Start with multiplying by one digit numbers counters in a way that they understand.

They can draw the counters, using colours to show different amounts or just use circles in the different columns to show their thinking as shown below.

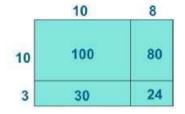

and showing the clear addition alongside the grid.

×	30	5
7	210	35

$$210 + 35 = 245$$

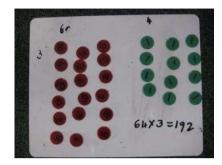

Moving forward, multiply by a 2 digit number showing the different rows within the grid method.

Х	1000	300	40	2
10	10000	3000	400	20
8	8000	2400	320	16

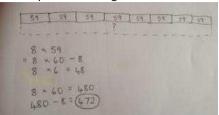

## Column multiplication

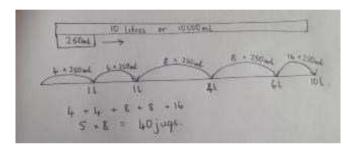

Children can continue to be supported by place value counters at the stage of multiplication.

It is important at this stage that they always multiply the ones first and note down their answer followed by the tens which they note below.

Bar modelling and number lines can support learners when solving problems with multiplication alongside the formal written methods.

Start with long multiplication, reminding the children about lining up their numbers clearly in columns.

If it helps, children can write out what they are solving next to their answer.

This moves to the more compact method.

Division within arrays	Link division to multiplication by creating an array and thinking about the number sentences that can be created.		Find the inverse of multiplication and division sentences by creating four linking number sentences.  7 x 4 = 28 4 x 7 = 28 28 ÷ 7 = 4 28 ÷ 4 = 7
	Eg $15 \div 3 = 5$ $5 \times 3 = 15$ $15 \div 5 = 3$ $3 \times 5 = 15$	Draw an array and use lines to split the array into groups to make multiplication and division sentences.	
Division with a remainder	14 ÷ 3 = Divide objects between groups and see how much is left over	Jump forward in equal jumps on a number line then see how many more you need to jump to find a remainder.  0 4 8 12 13  Draw dots and group them to divide an amount and clearly show a remainder.  • • • • • • • • • • • • • • • • • • •	Complete written divisions and show the remainder using r. $29 \div 8 = 3 \text{ REMAINDER 5} \\ \uparrow & \uparrow & \uparrow \\ \text{dividend divisor quotient} $ remainder

#### Short division

96 ÷ 3 =

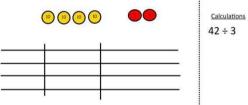

3

Find one third of 96.

Tens Units

3 2

Use place value counters to divide using the bus stop method alongside

42 ÷ 3=

Start with the biggest place value; share 40 into three groups. Put 1 ten in each group then 1 ten left over.

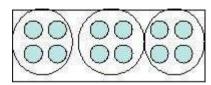

Exchange this ten for ten ones and then share the ones equally among the groups.

Look how much is in 1 group so the answer is 14.

Students can continue to use drawn diagrams with dots or circles to help them divide numbers into equal groups.

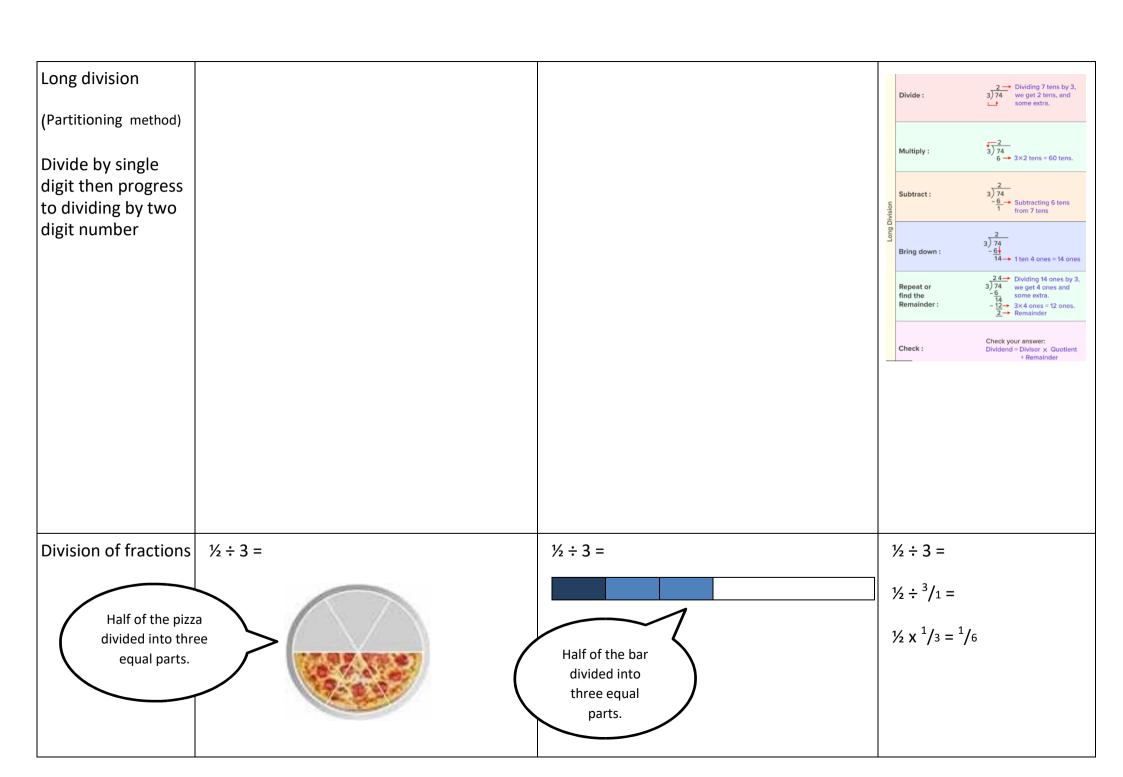

Encourage them to move towards counting in multiples to divide more efficiently.

Begin with divisions that divide equally with no remainder.

Move onto divisions with a remainder.

Finally move into decimal places to divide the total accurately.

## **Times Table Policy**

## TIMES IT!

Times Tables are at the heart of mental arithmetic, which in itself helps form the basis of a child's understanding and ability when working with number. Once the children have learnt their times tables by heart, they are then able to work far more confidently and efficiently through a wide range of more advanced calculations. At Priestsic Primary School, we believe that through a variety of interactive, visual, engaging and rote learning techniques, most children can achieve the full times table knowledge by the time they enter Year 5.

Reception	Year 1	Year 2	Year 3	Year 4	Year 5 and 6
I can count in steps of 1 I can count in steps of 2 I can count in steps of 10 I can count in steps of 5	I can count in steps of 1 I can count in steps of 2 I can count in steps of 10 I can count in steps of 5	I know my 2 times table and related division facts. I know my 5 times table and related division facts. I know my 10 times table and related division facts. I can count in steps of 3	I know my 3 times table I know my 6 times table I know my 4 times table I know my 8 times table I can count in steps of 4, 6, 8, 50 and 100	I know my 7 times table I know my 9 times table I know my 11 times table I know my 12 times table I can count in steps of 7, 9 and 25	Regular consolidation of all times tables Year 5 – I can count in powers of 10

#### **Rote learning**

Times tables will be recited daily. Chant as: 'One times two is two, two times two is four, three times two is six .....'

Also chant as 'one multiplied by two is two, one two is two, one lot of two is two, one group of two is two, the product of one and two is two etc.'

Use your counting stick to carry out this activity.

#### Display

Times tables should be readily available on enable table, for children to use as support and reference.

Year 1: 1, 2, 5 and 10 times tables should be available.

Year 2: 1, 2, 3, 5 and 10 times tables should be available

KS2: All times tables up to 12 x 12 should be available for children.

$1 \times 1 = 1$	$2 \times 1 = 2$	$3 \times 1 = 3$	$4 \times 1 = 4$	5 x 1 = 5
$1 \times 2 = 2$	$2 \times 2 = 4$	$3 \times 2 = 6$	$4 \times 2 = 8$	$5 \times 2 = 10$
$1 \times 3 = 3$	$2 \times 3 = 6$	$3 \times 3 = 9$	$4 \times 3 = 12$	$5 \times 3 = 15$
$1 \times 4 = 4$	$2 \times 4 = 8$	$3 \times 4 = 12$	$4 \times 4 = 16$	$5 \times 4 = 20$
$1 \times 5 = 5$	$2 \times 5 = 10$	$3 \times 5 = 15$	$4 \times 5 = 20$	$5 \times 5 = 25$
$1 \times 6 = 6$	$2 \times 6 = 12$	$3 \times 6 = 18$	$4 \times 6 = 24$	$5 \times 6 = 30$
$1 \times 7 = 7$	$2 \times 7 = 14$	$3 \times 7 = 21$	$4 \times 7 = 28$	$5 \times 7 = 35$
$1 \times 8 = 8$	$2 \times 8 = 16$	$3 \times 8 = 24$	$4 \times 8 = 32$	$5 \times 8 = 40$
$1 \times 9 = 9$	$2 \times 9 = 18$	$3 \times 9 = 27$	$4 \times 9 = 36$	$5 \times 9 = 45$
$1 \times 10 = 10$	$2 \times 10 = 20$	$3 \times 10 = 30$	$4 \times 10 = 40$	$5 \times 10 = 50$
$1 \times 11 = 11$	$2 \times 11 = 22$	$3 \times 11 = 33$	$4 \times 11 = 44$	$5 \times 11 = 55$
$1 \times 12 = 12$	$2 \times 12 = 24$	$3 \times 12 = 36$	$4 \times 12 = 48$	$5 \times 12 = 60$

	Process of teaching tir	nes tables	
Children will be taught the concept of multiplication using practical resources.	Children will progress on to using number lines or pictures.	Children will count in multiple steps.	Children will recite times tables by rote. Links will be made with 'grouping' and division whilst times tables are being taught.
Concrete BUILD IT! / USE IT!	Pictorial DRAW IT!	Abstract stage 1 SOLVE IT!	Abstract stage 2 PRACTISE IT!
Count in multiples supported by concrete objects in equal groups.  Use real-life arrays or build arrays.	Use a number line or pictures to continue support in counting in multiples.  3 x 2 = 6  What do you notice?  2 {  Link multiplic and division	Count in multiples of a number aloud.  Write sequences with multiples of numbers.  2, 4, 6, 8, 10  5, 10, 15, 20, 25, 30  Record multiplication number sentences.  1 × 7 = 7 2 × 7 = 14 3 × 7 = 21 4 × 7 = 28 2 8 ÷ 7 = 4 5 × 7 = 35 6 × 7 = 42 7 × 7 = 49 4 9 ÷ 7 = 7 8 × 7 = 56 9 × 7 = 63 9 × 7 = 63 9 × 7 = 63 10 × 7 = 70 11 × 7 = 77 12 × 7 = 84  station	Recite times tables by rote orally.  3 times 3 equals 9, so 9 divided by 3 equals 3. One third of 9 equals 3.  If you know 3 times 3 equals 9, what else do you know? 3 x 30 = 90 etc.

DIFFERENT WAYS OF COUNTING				
Single steps	Multiples	Use a rule eg 10 + 1 - 3	Missing numbers	Odds or evens
Fractions	Units of time	Millilitres/litres	Centimetres/metres	Decimals
Grams/kilograms	Negative numbers / Temperature	Percentages	Ordinals	Money
		VISUAL AIDS FOR COUNTING		
Number line	100 square	Counting beads	Bead frame	Objects
Number snake	Number tiles	Pocket number line	Real money, large money or magnetic money	Shapes eg count sides
Counting stick	Whiteboards making own visual prompt	Objects (real life)	Base 10 Hundreds, tens, units	Groups of straws
Real life packaging showing arrays eg egg boxes, biscuit packets	Wrapping paper, wall paper etc. to count number of shapes	Number track	Counting bead string	Tape measure or metre stick
Clocks	Measuring jugs	Thermometer	Bead frame/abacus	Calculator
Pictures	Fingers	Interactive whiteboard	Multilink/buttons etc.	Number cards

## **REHEARSE IT!**

#### Rehearsing old skills:

Children need to rehearse skills already taught to lead them to MASTERY.

The objectives will depend on your year group; however, it is important to keep old skills alive.

Remember to present the old skills in a variety of ways eg. Venn diagrams, Carroll diagrams, pictograms, tables, < and > signs, missing information, etc.

## **REASON IT!**

There is a huge emphasis on reasoning in maths lessons. Children need opportunities to justify and explain their knowledge. Ensure you are using:

NCETM reasoning questions NCETM mastery documents NRICH tasks Deeper Learning Stickers Groups Work

Odd one out	Would you rather have ?	Find the mistake.	What is the same and what is different?
True or false?	Here is the answer, explain how it was worked out.	Always, sometimes, never	Give me a silly answer to this problem. What makes it silly?
Tell me about this	Prove/disprove this statement.	Convince me that	What if?
Give me a hard and easy example of a calculation you could do with these numbers.  Give me a hard and easy example of a five-digit calculation.  Give me a hard and easy example of a question you could ask about this graph/pie chart etc.	What do you notice?	How are these linked?	If you know this fact, what else do you know? Eg. If you know:  4 + 6 = 10  You know:  40 + 60 = 100  100 - 40 = 60  The sum of 6 and 4 is 10.  4000 + 6000 = 10,000  100,000 - 60,000 = 40,000  If it is 6 o'clock now, in 4 hours it will be 10 o'clock.

## **RECALL IT!**

Rapid recalling of key facts is important in developing fluency and MASTERY.

As children recall facts, deepen their knowledge by reasoning in context eg. When recalling number, bonds totalling 100: 'tell me two lengths that together make one metre.'

Recall number bonds	Recall addition / subtraction facts	Recall multiplication / division facts	Recall fraction, decimal, percentage equivalents
Recall shape names and properties	Recall time related facts	Recall measurement facts	

		_
	<b>\</b> /	
/1	W	
_	v	
$\overline{}$		 - ē

Build mathematical vocabulary into every lesson.

Encourage children to speak in full sentences when giving responses.

Use Stem sentences as a model

Taboo – describe this word without saying it	How many words can you link to this word?	Match the word and its meaning.	Use a picture. How many mathematical words can you use?
Which of these words is the odd one out?	Write the definition of this word for someone who does not understand what it means.	Which word do these words link to?	Word of the day – use this word as many times in the day as possible (in context of course!)
Can you say a sentence which links these two words?	Tell me everything you can about this word.	Can you draw a picture to explain this word?	Hangman
